- Nature Park Papuk: Locality "Jankovac"

Proclamation of the Nature Park Papuk, on April the 23rd 1999, because of its extraordinary geological and biological variety and valuable cultural and historical inheritance.

Inside the Park are numerous areas with a higher protection level than other parts of the Park. These areas have been given the status of specially protected areas because of their unusual features, manifesting them as unique on the area, region, State or even beyond. Specially protected areas are: the geological nature monument Rupnica, the Forest Park Jankovac, the special reserve of forest vegetation Sekulinačke planine (Sekulinačke Mountains), the nature monument Dva hrasta (Two Oaks), the nature monument Stanište tise (Yew Habitat), and the special floristic reserve Pliš-Mališčak-Turjak-Lapjak.

- Nature Park Papuk: Locality Rupnica (Basalt columns)

As basaltic lava cools over an extended period of time, beautiful geometric forms emerge; incredible columns of hexagonal basalt rock.

The area of the Nature Park represents geological the most various area on this part of the Republic Croatia. Following the European and World initiatives about the protection of valuable geological inheritance, associations like the European Geoparks Network (EGN) and the Global Geoparks Network (GGN) were founded. The Nature Park Papuk became member of these mentioned associations in 2007, as first geological Park from Croatia.
